Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?	
<p>C625 is a posthole next to the wall (C607) which used to be a round wood stick to strengthen the wall. The diameter is about 2.4m, and it is between C627 and C628 which are the other posthole next to the wall.</p> <p>The soil is soft and powdery. the 'soil' between C627 and C625 is quite brown which is similar as C601. It is supposed to be the same material as the wall. (18.07.23)</p> <p>After excavated, it is a layer with lots of charcoal, the color of soil is gray and ashey, it is a layer in C616, but not a posthole and connect with C628.</p> <p>The layer is also same as 628, 627</p>
