◇ Samples: (list, noting: Sample #, Type, Volume)

Flotation Sample #1

Deposit Sieved: YES/NO

% Sieved: 100%

Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

The deposit is part of collapse of C607 (wall) and mix with sub soil C605. Excavate C641 to check the limit of C607, after that, it shows the rat northern part of C607 is also vertical and the structure was build layer by layer, and there are some clay in C641 from C607.
