△ Small Finds: (list, noting: Bag #, Type, Material) Chipped Stone #6 Ground Stone #7 Shell Artefact #8										
◇ Samples: (list, noting: Sample #, Type, Volume) Flotation #4										
Deposit Sieved: YES/NO					% Sieved: 100%					
Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context? C636 is below C605. with is quite similar to 605 but include <u>less of limestone</u> and the color of soil become <u>darker</u> . The is also few of finds in this layer. Excavate from south to north, try to find the northern limit and bottom of C607. At the southern area. it was C641 which is part of collapse of the C607 (wall). After excavated about 15 ~ 20cm deep. at the southwest corner. come up a round area with brown soil which seems like a pit set context 639 (with cut 640), and at the north limit come up an east-west area, with some pottery, seem like another pit. Get C643 (with cut C645). The other area the soil become light and with some white inclusion. it could be part of natural soil. which set C642 to keep excavation.
