Deposit Sieved: YES / NO % Sieved:

Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

* This layer has been recorded as ~~itself~~ apart because of the observation of its presence while digging and removing the stones.

* It can be said that some soil was part of the cover along with the stones of 614 and 618. Nonetheless, ~~it is pre~~ there is a probability of ~~was~~ a mix between ~~soil~~ ~~was~~ the soil infiltrated from the top (609) of the cover as well as with the fill of the burial (619), because of the collapse of the stone in the middle.

So this is not impossible that some of the material of 619, especially the first bag #2, is ~~at least~~ mixed with 629.
