Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?
a small amount of bones have been found on the southern part of the grave partly on a stone of the cover (614). It could have been a deposit like 617 or 608. However they might have human bones and by digging the soil, it looks like it belongs to the skeleton 623. The bones have maybe been moved there by animals.
-> see in lab if faunal remains or human bones and if belong to 623.
