Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

C600 is surface cleaning of whole trench, which was excavated by excavator, with 50 cm width between tooth. The machine clean from the earth surface down to about 40 ~ 60 cm depth, and cause the scar on the surface after cleaning.

The top 20cm is top soil and loose which is disturbed by agriculture, with plant roots and animal disturb.

At the south limit of the trench, it supposed to be the inside area of trench set C604, and the redish brown area which is apart from south limit consider to be the ditch set C601, but it seems like a wall after excavated.

And there is a skeleton at the 10m far from south wall, which set C603 (FI)

The machine clean from North to South.
