Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context? C204 is a deposit surface under C23a, at the southern end of the trench. The surface was flat and soft. The context was separated from the rest of the trench by a cut (C206). While the nature of the context remains unknown because ^{it is} unexcavated, the fact that the direction of the cut is E-W, which fits the enclosure of the domestic area showed by magnetometry, this context (C204) could be the deposit inside of the domestic area of the site.
