| Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context? Start at 8.5m apart from the South wall. excavated from north to south to find where is the limit of the wall. (made of burnt clay). The soil is quite hard and with lot of limestone inclusion, and similar to C604.620 There is only few pottery at C605. The pottery from this area is includes LNI and LII. The soil which is next to C601 is quite brown which is supposed cause by the falling mud from the wall and mix with subsoil, so make it compound. C605 could be outside of the wall, so there only few of artefact. After excavated 35cm the soil change color, which became darker, and with less limestone. change the layer to C636. Between C605 and C601, there is an area which its soil is mixed, it seems to be the collapse area of the wall, which set C641. | | |
