Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

Under C214, C217 was seen at the NW corner the reddish brown layer with whitish sand inclusions, possibly weathered rocks, which indicate the context could be some kind of geology sediment. It contained many small charcoal flecks, smaller than 5mm, possibly from the remains of the burnt building made of clay that the macrobotany -shaped two charcoal samples were collected, along with some pottery, ^{bone} shells (small amount).
