Discussion: Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context? (Additional sketches may be drawn here if required).

07/21-25 C242 is the cut for C243. The boundary between C242 and C231 is clear at the north, and a bit fuzzy toward the east. The west and south side of the pit is connected with the wall of the trench. The shape of the cut is wide and flat in the first 30 cm, then step down to the west. This pit is on south west part of the trench. Found when we removing C231. We might lose the top of the pit. This pit was defined as part of the context C231, until we found there were a lot of animal bones.

07/26. ^{keep} We removed the fill of the cut about 50 cm in order to reach the bottom of the pit. The bottom is 58 cm deep from base. The slope of the base is pointed. _{line.}

According to the finds we found there, It's a pit people put the things they abandon. We found the animal bones, are mostly lower part of the limbs. And special finds as ^(?) bronze bead.
Copper bead
