<b>Discussion:</b> Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context? The layer is under ash layer, with some charcoal and clay material, there are some pottery and animal bone. The layer is between ash and natural soil, so it is quite compound and was cut by C631, the soil is similar to C630, but with some natural soil mix inside, and less ash. Under the C638 is natural layer, which is white and powdery. There is a burned clay and a ground stone, possible to be the earliest phase.
