**Discussion:** Consider: What is it? What is your interpretation rationale? How does this context relate to surrounding contexts? Have there been post-depositional processes? Are there special characteristics of this context? How was this context formed? What do you think is the origin of this context?

This layer corresponds to the fill of the burial. Very loose in some spots, it could have correspond to a mix of intentionality fill and infiltration from the cover.

At the level of the skull, very close to the jaw we notice the presence of a flint (619.6), a shell (619.13) and a tooth (molar) (619.24). They have been recorded as small finds in 619. At least the shell could have been piece of a necklace.

3 other shells (619.18, 619.19, 619.20) Found SE of cranium
